CATFISH ARE DIEING**

August 29, 2017

EVERYONE! You should be aware that we've had a large number of Catfish floating in the ponds today. Use your own judgement as to the health of Catfish taken from our property when cleaning and, subsequently, eating these fish.

They likely were shocked by the difference in water temperature when they were stocked (they were transported in cold water and our ponds are warm). But you are being warned of this fish kill in case there was something else going on. Again, use you best judgement when cleaning these fish to make sure they appear healthy before consuming them.
